Antique Oak
Fascia Board MFN360A

Ashwood
Fascia Board MFN360H

Burnt Cedar
Fascia Board MFN360R

Ebony Grey
Fascia Board MFN360Y

Fascia Board

Working Specifications

Fascia Boards should be fully supported by the outer rim joists or supports at 12" centers.

They should be installed with two Durafix screws every 12" centers.

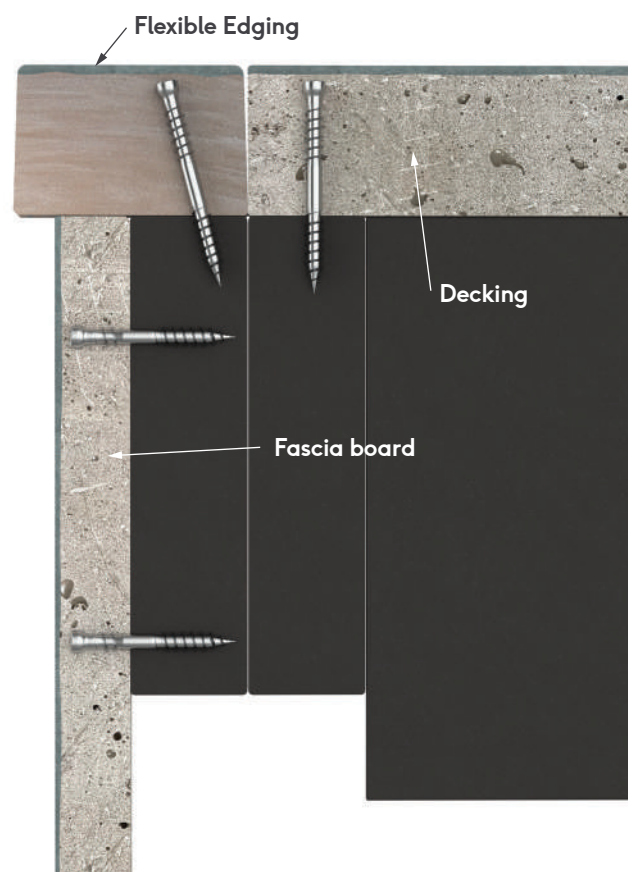

When joining two Fascia Boards on a straight run, they should be joined together on a 22.5° scarf joint so that one piece slides over the other.

The outward facing cut should be painted with touch-up coating prior to installation and should not be glued.

When joining two Fascia Boards on a curve, they should be joined on a 45° angle and glued together prior to fitting in place.

When mitering any Fascia Boards for a corner, it is best practice—where possible—to cut the miter from the same board to account for natural variance in grain and sizing.

All mitered corners must be glued together prior to fitting.

Tholin is reseller van Millboard. We werken hiervoor samen met ons netwerk van zorgvuldig gekozen partners: allemaal duurzame en innovatieve bedrijven met een oog voor detail. Natuur, mens en product komen in ons netwerk samen. We werken met partners door heel Nederland aan kwalitatief hoogstaande, eigentijdse en bovenal duurzame bouwprojecten.
